

Mission

To reduce the overpopulation of outside cats in the San Antonio area through rescue and Trap-Neuter-Return (TNR). Community outreach educates the public about stray and feral cats and the need to spay/neuter pets. Support services assist colony caretakers as resources allow. Advocacy works to protect cats from cruelty and help colony feeders with legally-based solutions.

Vision

Our vision is to live in a community where no kittens are born wild on the street, where no cat capable of living in a home is lacking one, and where no outside cats go wanting for food, water, shelter, and appropriate care.

Volunteer

We are an all-volunteer organization and need your help to continue our programs and mission. Please visit our website to see our current needs and volunteer opportunities.

Donations

Our programs are funded through donations and fundraisers. Your donation is tax deductible. Online donations can be made through our website or checks can be mailed to the address on the front of this brochure.

Shop online? You can support us with purchases made through iGive.com and smile.amazon.com. Thank You!

Feral Vs Stray Cats

Feral cats are un-socialized cats that are afraid of people and keep their distance. They do not want to be pets and prefer to live outside, which is their home.

Stray cats were former pets and may seek human attention. The longer they stay outside, the more feral they become.

Colonies form around a food or water source and can include both feral and stray cats. Survival is difficult as they fight over food, territory and mates. Many feral colonies originated from unneutered stray cats.

Trap-Neuter-Return

TNR, or Trap-Neuter-Return, is the most effective and humane method of controlling outside cat populations. With TNR, cats are trapped, spayed or neutered, vaccinated against rabies and ear-tipped for identification. After recovery, the cats are returned to where they were trapped.

After TNR, the mating behaviors of fighting and yowling stop. Cats will still spray to mark their territory but the smell is greatly diminished. Sterilized and vaccinated cats, many times will keep unsterilized cats out of their territory and with no kittens born, the numbers stabilize and start to decrease.

Cats in a managed colony can live safe and healthy lives, while providing free rodent control for their caretakers.

TNR in San Antonio

San Antonio has a very large outside cat population. Our warm climate allows cats to reproduce year-round. Pets that are not fixed get out and get pregnant. We also have a high abandonment rate where people move away and leave their pets behind.

Our city officials recognize and support TNR as the solution to overpopulation and we invite the citizens of San Antonio to do the same. *Spayed or neutered outside cats are legal in San Antonio.* Let us help you get the cats you see in your neighborhoods and apartment complexes fixed before they become a nuisance. Call us today!

Our Programs

TNR Classes – Our 90-minute training class will prepare you to trap cats safely, give low cost spay/neuter options, and explain how and why TNR works.

Trap Loans - We loan traps free of charge to those who have completed the training. There is a refundable deposit.

Helpline - Leave a message on our Helpline and a volunteer will call you back within 24 hours. We provide information and resources to help with your cat situation, but we cannot remove them.

Spay/Neuter Subsidy - We feel it is imperative to make TNR as affordable as possible for everyone who wants to help end the suffering of outside cats and kittens. At our partner clinics it costs only \$20 for the surgery and rabies vaccination.

Adoption - We rescue kittens and friendly strays that are placed in our home-based foster/adoption program, as resources allow.

Cat Crisis Fund - We can assist with vet bills from Good Samaritans and colony caretakers when cats require urgent care for illness or injury, as our resources allow.

Trapper Team - For those who are unable to trap due to age or disability, we have volunteers who may be able to help people who are feeding and want to stop the breeding.
